**FCPX: 2.10 VIDEO & AUDIO EFFECTS**

Final Cut Pro X offers a collection of video and audio effects that can be used to transform and stylize your video and audio.

**Effects Browser**

Effects can be found in the Effects Browser. Click on the Effects icon to show or hide the Effects Browser. Effects are divided into 2 sections; video and audio. Under each, there is a variety of Effects subcategories to choose from.

To apply a video effect, drag and drop the Effect on the clip you want to apply the effect to. To apply an audio effect, drag and drop the effect on the clip you want to apply the effect to.

To preview an effect, either hover your cursor over the effect’s thumbnail to quickly view it applied to the selected clip in your Timeline, or select the effect and play it in the Playback window to preview the effect applied to the video or audio that is selected in your Timeline.

**Modify Effects**

After applying an effect to a clip, select the clip in your Timeline. Open the Inspector by clicking on the icon in the Toolbar. To modify a video effect, click on the Video tab, and you will find your effect(s) under Effects. To modify an audio effect, click on the Audio tab and you will find your effect(s) under Effects.
Each effect has different parameters to change. Play around to achieve the look or sound that you are going for.

Click on the blue box next to “Effects” to disable all the Effects. Click on the blue box next to a specific effect to disable that specific effect.
To delete an effect, select the effect in the Inspector and click on the Delete key on your keyboard.
