F5 Pre-Windows Login VPN Client

To Establish an F5 BIG-IP VPN session before logging in to Windows:

One thing to note is that when making a pre-Windows login VPN connection, the F5 icon is not shown in the systray. You will need to log out of Windows and back in to re-establish an expired VPN connection. Trying to launch F5 after logging in with a pre-Windows login VPN connection is not supported. Making a VPN connection the traditional way after logging into Windows works the same as before.

Click icon to establish VPN connection.
